OUR PLATFORM

Seamlessly invest and manage holdings of our investment products using our blockchain engineers, data scientists, developers and designers

INVESTMENT OPTIONS

BENEFITS OF GOLD INVESTMENTS

GOLD RETAINS ITS VALUE

Unlike common coins, paper currencies, or other types of assets, gold is known for maintaining its value over centuries. The unique physical properties of gold are also highly esteemed. The precious metal is known for its resistance to corrosion and the fact that it can be melted. This allows it to be worked with very quicly or stamped as a coin.

DIFFERENT WAYS TO HOLD GOLD

It is usually a good idea to hold some physical gold in the form of coins or hars. However, there are also other convenient options available for anyone looking to invest in gold. One way to profit from gold is to invest in gold mining shares. This allows you to reap the benefits of gold price increases without the hassle of storing the physical metal. During gold bull markets, mining shares often outpace the price of gold.

GOLD INVESTMENT OPTION

Maximum Capital Margin: Unlimited

Investment Capital Return: True

Retrun on Investments: 6% weekly

Elapse Duration: 1 week

GOLD IRAS

Gold-based IRAs are becoming increasignly popular these days. Backing your IRA with gold offers excellent protection for your retirement funds when market changes can implode your overall investment portfolio. The gold IRA is a retirement account that is approved by the government and backed by physical gold. Traditional IRAs are often loaded with equities from a time when the economy and government was more stable. The global economy is showing signs of weakness.

P.T.O

HEDGE AGAINST INFLATION

Gold has a well-earned reputation for making a great hedge against the inflation that can eat away at the value of paper assets. No matter what happens to gold, it will retain the value that it took to mine and produce it, while paper assets can theoretically go to zero.

POLITICAL INSTABILITY

Markets hate uncertainty. Gold is historically known for retaining its value regardless of external political conditions. Whenever there is a political crisis, gold tends to take off. People love the safety that investing in gold delivers.

CONSTRAINTS ON SUPPLY

Much of the available gold supply is the result of global central banks selling gold bullion. Generally, when the amount of gold decreases, the price of gold increased. Therefore, papers
assets are too much of a risk
for many investors. Especially
given the events of the Great
Recession, the uncertainties of
investing in paper assets led to
the reduction of the retirement
accounts of several people.
A Gold based IRA can offer
substantial portfolio

OUR WORD

If you're ready to diversify and protect your wealth in these uncertain times, we encourage you to join us today. Take advantage of the safe harbor that only gold can provide.

HIGH DEMAND

Emerging markets, like highly populated India and China, have increased the demand for gold. Gold typically has a more prominent place in the culture of these types of savings. In India, gold is highly valued during the wedding season, incraesing the global demand for gold.

OIL INVESTMENT OPTION

HIGH ROI

Every business owner aims to earn a high return on investment when they put a lot of money at stake. However, when it comes to investing in oil and gas, this is the strongest reason for everyone to but an interest in this industry. For your information, oil and gas have a huge potential for profit, which is why it is a compelling choice. However, it is slightly riskier than the other industries because of the varying prices of oiol and gas.

INVESTMENT DETAILS

Minimum Capital Margin: \$1000

Maximum Capital Margin: Unlimited
Investment Capital Return: True

WHY OIL AND GAS

The oil and gas industry is one of the largest sectors in the world in terms of dollar value, generating an estimated \$3.3 trilion in revenue annually. Oil is crucial to the global economic framework, investors looking to enter the oil and gas industry can quickly be overwhelmed by the complex jargon and unique metrics used throughout the sector

STRONG CASHFLOW

A profitable investment in any part of this industry is equivalent to owning your annuity that provides you with consistent cash flow. Bear in mind, with most of the financial annuities, you will have to pay a premium amount for several years before you can receive a payment. Put this on the other side and compare it with a profitable oil or gas project. This means you will only have to wait for a few months for the first payment to

OUR WORD

Oil and gas are two of the most important commodities in the modern world. Investing in them has the potential to generate signi|cant pro|ts for you, but commodities can also be volatile and risky.

arrive. Most people are skeptical about investing in the oil and gas industry because they doubt the time of receiving their first payment.

STABLE AND MARKET-PROOF

Unlike the stock market, oil and gas investments are relatively stable and generally free from the influence of destabilizing market forces. As such, a portfolio rich in oil and gas investments can provide insulation from outside market forces and inflation.

LOADED WITH TAX INCENTIVES

As detailed here, the benefits to oil and gas investors when it comes to taxation are numerous and unique. Intangible Drilling Cost deductions provide up to 60-80 percent of well expenses off taxes in the first year. And 15 percent of the property's gross tax free. You'd be hard pressed to find a better incentivized investment opportunity.

DIVERSIFICATION

Historically, oil and gas companies have provided useful diversification in an investor's portfolio. Becauses oil and gas are essential parts of the economy and especially transportation, rising gas price often weaken other sectors of the economy. Exposure to oil can provide a hedge against falling pricse in other companies' shares.

REAL ESTATE INVESTMENT OPTION

INVESTMENT DETAILS

Minimum Capital Margin: \$1000

Maximum Capital Margin: Unlimited

Investment Capital Return: True

Return On Investments: 24.8% Weekly

Elapse Duration: 4 weeks

OUR WORD

Real estate is less volatile than stocks, whose value can rise or fall more quickly. But real estate is less liquid than stocks: It's easier to sell your stocks and gain access to your money than it is your real estate investments

BENEFITS OF REAL ESTATE INVESTMENTS

LONG-TERM SECURITY

Real estate is a long-term investment, meaning you can hold it for several years as you wait forit to appreciate. At the same time if you rent out your real estate you can earn monthly income while you wait for your property's value to rise.

PROTECTION AGAINST INFLATION

Real estate investments are considered protection against inflation. When the prices of goods and services are rising, home values and rents typically increase, too. Investment properties, then, can provide you with rising monthly income and appreciation to help protect you financially when the costs of everything else ist

CHANCE TO BUILD CAPITAL

The big goal of real estate investing is to increase your cash, otherwise known as building capital. When you sell a property that has risen in value, you'll boost your capital. The key, of course, is to invest in the right properties that will rise in value.

ABILITY TO LEVERAGE FUNDS

When investing in real estate you probably can't afford to buy properties in full. After all, that single-family home you plan to rent might cost \$200,000 or\ more. That's where leverage comes in. Leverage in real estate means you're using other people's money to purchase properties. In this case, you'll take out loans from banks, mortagage lenders or credit unions and pay them back over time. This allows you to add to your real estate holdings without spending the full amount of money you'd need to buy them on your own.

DIVERSIFICATION

Adding real estate to your investments boosts your diversification, which can protect you in times of economic turmoil. Say certain stocks are suffering because of an economic downturn. The investment properties in your portfolio might still be increasing in value, protecting you from the losses you other investments are taking.

REITS (REAL ESTATE INVESTMENT TRUSTS)

Buying into REITs, short for real estate investment trust, is one of the easiest ways to invest in real estate. Why? with a REIT, you invest in real estate without having to worry about maintaining or managing any physical buldings. REITs are companies that own real estate, anything from retail properties to apartment buildings, hotels, offices or warehouses. When you buy into a REIT, you purchase a share of these properties. It's a bit like investing in a mutual fund, only instead of stocks, a REIT deals with real estate. You can earn money from REIT in two ways: First, REITs make regular dividend payments to investors. Secondly, if the value of the REIT increases, you can sell your investment for a profit. YOu can invest in a REIT just as you would invest in a stock: REITs are listed on the major stock exchanges.

AGRICULTURE AND INFRASTRUCTURE INVESTMENT OPTION

BENEFITS OF AGRICULTURE AND INFRASTRUCTURE INVESTMENTS

BUILT-IN SECURITY

When you invest in gold, you're investing in a finite resource. The amount of farmland in the United States is decreasing every year, and yet the country's farms make up 10 percent oftt

INVESTMENT DETAILS

Minimum Capital Margin: \$200

Maximum Capital Margin: Unlimited
Investment Capital Return: True

Return On Investments: .4.6% Weekly

Elapse Duration: 1 week

the world's farmland. Coupled with a growing population and a demand for food that's not decreasing anytime soon, the need for farmland is only going to increase over time - even if there's less of it than ever.

MULTIPLE REVENUE SOURCES

Farmland is a unique investment insofar as it has multiple income sources. The value of the land itself is perhaps the largest source of potential income for investors, but it's far from the only one. When you invest in farmland, you're also opening up your portfolio to gains

WHY AGRICULTURE & INFRASTRUCTURE

a low-risk portfolio diversification; offering profitable returns financially and also ensuring food security in the economy. Presently, crude agricultural practices has been discouraged with the advent of precision agriculture

through other revenue streams. For example, you're entitled to a share of the profits when goods go to market, and enjoy a stake in the farm upon which the land sits. When either of these two generate income or revenue, portion of that goes to you as a partial owner.

INFLATION HEDGING

Finding good cover from inflation can be challenging enough for the average investor. Add market volatility and near - zero interest rates into the mix, and this task gets significantly harder. Savvy investors usually seek shelter by way of inflation-hedged investments. Essentially, these investments can provide a position that is either les affected or positively affected by inflation than your usual market pic.t

AGRICULTURE IS MORE SUSTAINABLE

When you invest in agriculture, you are investing in a physical plot of land. This land's value only appreciates, unlike stocks in busineses. Investing in agriculture is typically a long term venture. Returns vary depending not only on commodity prices, but on how much and how fast the land appreciates. Depending on the farm's location, current commodity prices and other factors, returns on investment range from 3-5% for commodity based land, or 10-15% for specialty crops. Because agriculture investments are long term, they can be set up to be kept in the investor's family and passed down to generations. Agricultural investments can appreciate indefinitely.

OUR WORD

Investing in agriculture and farmers keeps people fed and clothed. We all need to eat. Trends show that the amount of food, especially protein, people take in per day is steadily increasing. At the same time, some experts fear that at the rate of the population's consumption, soil could become a scarce commodity, making the demand for fertile agricultural land even larger

ABOUT WORTHFIN

worthfininvestments.com ("Website") is a website owned and operated by Worthfin Investments Inc ("We" or "Us"). We are an international financial company engaged in investment activities, which are related to wealth and asset management, commodity and economic trading, fund management, ETFs, trading on financial markets and cryptocurrency performed by qualified investments and financial professional.

IS WORTHFIN INVESTMENTS A REGULATED AND LICENSED COMPANY?

DICTIONARY

BEAR

This refers to the people who are expecting the price of a crypto asset to fall.

BEARISH

This refers to the sentiments of a trader who thinks a crypto asset will depreciate in price.

BITCOIN CORE

This is the main software that allows users to interact with the Bitcoin blockchain network.

BITCOIN HALVING

This is when the miner's bitcoin reward is cut in half.

BLOCK HEIGHT

Block height is a measurement of the number of blocks that came before a particular block in a blockchain network.

BLOCK REWARD

A block reward is a payment awarded to a blockchain network miner upon successfully validating a new block.

BLOCK SIZE

In blockchain technology, block size refers to the amount of data about transactions a single block in the chain can carry.

BLOCK TIME

Block time refers to the amount of time it takes for a new block to be added to a block-chain.

BLOCK WALLET

A brain wallet refers to a crypto private key or seed phrase that has been memorized by its owner.

BRUTE FORCE ATTACK

This refers to an attack in which the attacker tries to bypass an accounts security.

BUBBLE

A bubble occurs when the prices of an asset get really inflated and then crashes.

BUILDER

This refers to members of the blockchain and crypto community who are helping to improve adoption by contributing to the construction of blockchain infrastructure over-time.

BULL MARKET

A bull market is a market that is on the rise and where the economy is sound.

BULL RUN

A bull run is a specific time period in a financial market cycle during which asset prices can experience a significant upward trend.

A bull trap is a market signal that signifies an initial recovery in the price of a declining asset, followed by a further decline.

BULLISH

A person who is bullish on bitcoin may also be referred to as a bitcoin "bull".

BURN/BURNING

In this process, the miners and developers intentionally remove the coins from circulation.

BUY THE DIP / BUYING THE DIP

In this sense, a dip is regarded as a Crypto flash sale that should be taken advantage of to acquire more of the said crypto = asset.

CARDANO

Cardano is a public open-source and decentralized blockchain platform. it is designed to be a more efficient alternative to proof of work systems.

CENTRAL BANK

A central bank controls the monetary policy and currency of a nation-state.

CENTRAL BANK DIGITAL CURRENCY

A central bank digital currency (CBDC) is a digital version of a country's fiat currency.

CENTRALIZATION

This refers to the level of privilege and distribution of nodes verifying and managing a blockchain network.

CHAINLINK (LINK)

Chainlink is the "oracle network" that serves real-time data to smart contracts on the blockchain.

CIPHERTEXT

Ciphertext refers to encrypted text that is unreadable without authorized access.

CIRCULATING SUPPLY

This refers to the total number of tokens of any cryptocurrencies that are available on the market at a given time.

COIN SWAP (OR TOKEN SWAP)

This happens when a platform replaces an existing token with a significantly updated one.

COLD STORAGE

This is the offline storage of cryptocurrencies.

COLD WALLET

A cold wallet is a cryptocurrency wallet that is not connected to the internet.

CONFIRMATION

This is the measurement of how many blocks have been finalized since a transaction was sent from one address to another.

CONFIRMATION TIME

The is the time frame it takes for transactions sent from one address to another to be finalized.

CONSENSUS MECHANISM

This is an algorithm that participants in a blockchain network use to reach an agreement on the state of the blockchain ledger.

CORRECTION

This is an occurrence that signifies that the market or a specific asset has just had a large drop in price from its recent higher price.

COST BASIS

This the pegged starting value of a cryptocurrency that you own.

COUNTERPARTY

This protocol allows the issuance of tokens on the Bitcoin blockchain.

CRYPTO RANSOMWARE

In this case, a user's access to their data is blocked by an attacker using malware.

CRYPTO TRADING PAIRS

This means that you can view the value of one cryptocurrency asset against another.

CRYPTO-BACKED LOAN

This lives on the blockchain and requires borrowers to provide cryptocurrency as collateral.

CRYPTO-BACKED LOAN

This lives on the blockchain and requires borrowers to provide cryptocurrency as collateral.

CRYPTO-BACKED STABLECOIN

They are pegged to the value of an underlying cryptocurrency asset.

CYBERSECURITY

This is also known as computer security or information technology (IT) security.

CYPHERPUNK

This includes individuals (cypherpunks) who advocate the widespread use of cryptography, blockchain, as a means for engendering social and political change.

DAO (DECENTRALIZED AUTONOMOUS ORGANIZATION)

This is a blockchain-based organization that is democratically managed by members through self-executing open-source code and formalized by smart contracts.

DAPPS

This stands for Decentralized Applications which refers to applications designed by developers and deployed on a blockchain to carry out actions without intermediaries.

DAY TRADING

This involves taking a position in the market and exiting that same day or within a 24-hour timeframe.

DCA (DOLLAR COST AVERAGING)

This is the short form of "Dollar Cost Averaging" which is an investing strategy where an investor invests a total sum of money in small increments over a period of time, in a crypto asset.

DEAD COIN

These cryptocurrencies have been abandoned by non-functioning projects.

DECENTRALIZATION

This simply refers to the distribution of power away from a central point.

DECRYPTION

Often relates to methods of unencrypting data manually, through a unique identifier code, or using specialized cryptographic keys.

DEFI

This is the short form of Decentralized Finance which refers to financial activities that are conducted without the involvement of an intermediary like a bank, the government or other financial institution.

DELEGATED PROOF OF STAKE (DPOS)

This encourages users to confirm network data and ensure system security by staking collateral.

CRYPTO-COLLATERIZED LOAN

For this loan, the lender takes a cryptocurrency deposit as collateral to issue a loan in another cryptocurrency or fiat currency.

CRYPTO JACKING

In this instance, the victim's computer, or other hardware, is made a crypto mine without their knowledge.

CRYPTO ART

Is native to a blockchain and has its own particular aesthetic.

CRYPTOCURRENCY

Cryptocurrency is a digital asset that circulates on the internet as a medium of exchange.

CRYPTOCURRENCY EXCHANGE

This is an exchange where digital assets can be sold traded and bought, sold, for fiat currency or other cryptocurrencies.

CRYPTOCURRENCY PAIR (TRADING PAIR)

This is a function available on exchanges that allow users to view the value of one cryptocurrency asset against another.

CRYPTOCURRENCY WALLET

Has a public address that people can use to send you digital assets, and a private key to confirm the transfer of digital assets to others.

CRYPTOGRAPHIC PROOF

This is used to prove and verify` data without revealing any other details about the data itself.

CRYPTOMINNING

This process allows network nodes on a Proof-of-Work consensus mechanism to verify transactions and add new blocks to the blockchain.

CRYPTOSIS

This refers to the endless desire to consume every bit of available information on cryptocurrencies.

CUSTODIAL WALLET

Here a third party holds a user's private keys and cryptocurrency funds.

CYBER ATTACK

This is an intrusion on online data carried out by criminals against a computer network, or related software/hardware device.

DELISTING

This is the removal of a crypto asset from an exchange.

DESKTOP WALLET

This kind of software wallet is downloaded directly onto a computing device. They are almost always non-custodial in nature.

DIGITAL ASSET

All cryptocurrencies are digital assets, while not all digital assets are cryptocurrencies.

DIGITAL DOLLAR

This is the tokenized version of the United States Dollar.

DIGITAL SIGNATURE

In cryptocurrency, this process involves using a private key to digitally sign a transaction

DISTRIBUTED LEDGER

This refers to a system of recording information that is distributed or spread across several devices.

DISTRIBUTED LEDGER TECHNOLOGY (DLT)

This is a shared database upon which transactions and associated details are recorded by different parties all at once.

DO YOUR OWN RESEARCH

This term is used to encourage potential investors to study, analyze, and research thoroughly before investing.

DOUBLE-SPEND PROBLEM

This refers to a critical risk with digital currencies, in which the same funds can be copied and spent more than once.

DUE DILIGENCE

This refers to a thorough investigation, audit, or review performed to confirm the facts of a matter under consideration.

DUMP

This refers to the crash in the price of a crypto asset which is triggered by massive sell-offs after an associated spread of fear, uncertainty and doubt.

ENHANCED DUE DILIGENCE

This is (KYC) process provides a better background knowledge of potential business partnerships and highlights risks that cannot be detected via Due Diligence (DD) alone.

ESCROW

This refers to a third party that holds the financial resources presented for a transaction on behalf of other parties when both parties involved in the transaction may not trust each other.

ETHER (ETH)

Ether (ETH) is the native cryptocurrency of the Ethereum blockchain and plays an integral role in the Ethereum ecosystem.

ETHEREUM

Launched in 2015 as a decentralized, blockchain-based global supercomputer to serve as the foundation for an ecosystem of interoperable, decentralized applications (dApps) powered by token economies and automated smart contracts.

ETHEREUM 2.0

This is a significant set of updates to the Ethereum blockchain intended to vastly improve its scalability and broader utility.

EXCHANGE

A digital marketplace that facilities the buying and selling of cryptocurrencies.

FAIR LAUNCH

This is the equitable and transparent initial distribution of coins in a blockchain project.

FEAR OF MISSING OUT (FOMO)

Is an acronym that refers to the feeling that follows missing out on a specific investment opportunity after the price of a cryptocurrency or another asset substantially rise.

FIAT CURRENCIES

These are traditional currencies or paper money, minted by the Central Banks or Federal Reserves of Countries.

FRACTAL

This is a pattern of price movement which has occurred earlier and is likely to occur again.

FUD

This stands for Fear, Uncertainty and Doubt.

GAS

This refers to a fee that is being paid to use a service on a blockchain network.

GENESIS BLOCK

This refers to the first block of a cryptocurrency ever mined.

HALVING

This refers to when the amount of new Bitcoin entering circulation gets halved.

HASH

This is a unique string of numbers and letters that identify blocks or transactions done on a blockchain.

HODL

This stands for "Hold on For Dear Life"

HOT WALLET

This is a software-based cryptocurrency wallet that is connected to the internet.

ICO

This stands for "Initial Coin Offering"

KYC

This stands for "Know Your Customer"

LEVERAGE

This is the extra amount of asset bought or sold which is over your capital.

LIMIT ORDER

A limit order is an order to buy or sell a crypto asset at a specific price or desired price.

LIQUIDATION

This happens when the trade or position goes the opposite direction.

LIQUIDITY

This refers to the measure of how actively a crypto asset is being traded in the market.

LONG POSITION

This is simply a buy position with leverage. You enter a long position when you expect the price of a crypto asset to rise.

VOLATILITY

This is the degree of uncertainty about the future price of a crypto asset.

WHITE PAPER

This refers to documents that are created by the developers of a certain digital asset.

These documents offer comprehensive information on the digital asset as well as its underlying technology.

SECURITY

HOW YOU CAN PROTECT YOURSELF

Beware Fraudulent E-Mails and Web Sites "Phishing" is a rampant Internet scam that relies on "spoofed" e-mails, purportedly from well known firms, to lure individuals to fraudulent Web sites that look and feel like the well known firm's Web site. At such Web sites, victims are asked to provide personal information about themselves, such as their name, address and credit card number. These fraudulent e-mails and Web sites may also try to install malicious software on your computer that monitors your activities and sends sensitive personal information (your passwords, for example) to a remote location. With that information, criminals can commit identity theft, credit card fraud and other crimes. You can protect yourself by following these best practices when using the Internet:

- Be aware that e-mail is insecure and easy to forge. E-mail that appears to be from a friend or company you do business with may be fraudulent and designed to trick you into providing personal information about yourself or installing dangerous software.
- Do not respond to e-mails or pop-up messages that solicit your personal information: name, address, Social Security number, etc.
- Only access trusted Web sites that you found other than by clicking on a Web site address in an e-mail and then added to your browser's bookmarks. Otherwise, manually type the address into your browser and then bookmark it. When you receive an e-mail, rather than clicking on a Web site address in the e-mail, which can bring you to a fraudulent site, use the bookmark to access that site.

- If you receive an e-mail from daily green partners you are uncertain about or which you believe to be fraudulent, please forward it to abuse@undefined. daily green partners will investigate the e-mail and respond back to you. If you are a client of the firm, please notify your sales representative or investment professional, as well. Please be advised that from time to time external parties may pose as daily green partners through fraudulent communications via email and phone calls in scams to market fake prospectus documents and to solicit monetary payments. It is important to know that any communication you receive from daily green partners would come from an @dailygreenpartners.org e-mail address (not from a free email account such as Yahoo, Gmail or any other domain outside of "@dailygreenpartners.org") and/or be found on the dailygreenpartners.org website. If you receive a communication that you believe may not be from daily green partners, please contact us. Personal Computer Security Tips No security practice is foolproof. You can, however, help protect yourself by following these best practices to secure your personal computer:
- * Install antivirus and anti-spyware software on your computer and make sure it is up to date with the most recent virus/spyware signatures.
- * Make sure your computer is up to date with the most recent software patches. Patches are software updates that often address software vulnerabilities that phishing scams and viruses exploit.
- * Install a firewall between your computer and the Internet. A firewall is software or hardware that acts as a buffer between your computer and the Internet that limits access to your computer and blocks communications from unauthorized sources.
- * Kindly contact the manufacturer of your computer for additional information and recommendations.

GLOSSARY OF TERMS

FIREWALL

A system designed to prevent unauthorised access to or from a private network. Firewalls can be implemented in both hardware and software, or a combination of both. Firewalls are frequently used to prevent unauthorised Internet users from accessing private networks connected to the Internet.

PATCH

Also called a service patch, a fix to a program bug. A patch is an actual piece of object code that is inserted into (patched into) an executable program. Patches typically are available as downloads over the Internet.

ANTIVIRUS SOFTWARE

A utility that searches a hard disk for viruses and removes any that are found. Most antivirus programs include an auto-update feature that enables the program to download profiles of new viruses so that it can check for the new viruses as soon as they are discovered.

URL

Abbreviation of Uniform Resource Locator, the global address of documents and other resources on the World Wide Web.

SPOOF

To fool. In networking, the term is used to describe a variety of ways in which hardware and software can be fooled.

PHISING

Phishing attacks use "spoofed" e-mails and fraudulent Websites designed to fool recipients into divulging personal financial data such as credit card numbers, account usernames and passwords, Social Security numbers, etc.

By hijacking the trusted brands of well-known banks, online retailers and credit card companies, phishers are able to convince up to 5% of recipients to respond to them.

COMPUTER VIRUS

A program or piece of code that is loaded onto your computer without your knowledge and runs against your wishes. Viruses can also replicate themse lves. All computer viruses are manmade. An even more dangerous type of virus is one capable of transmitting itself across networks and bypassing security systems.
